

Crown

A dental crown is a cap or covering for an existing tooth. It can improve the way a decayed or broken tooth looks and make it stronger.

Bridge

A dental bridge can replace one or multiple missing teeth. The bridge is attached to your teeth on either side of the gap. Unlike dentures, a dental bridge is fixed and does not have to be removed on a nightly basis.

Veneers

Dental veneers are thin, custom-made shells of tooth-colored materials designed to cover the front surface of teeth to change your appearance. These shells are bonded to the front of the teeth, changing their color, shape, size, or length.
